

Bill Of Materials Features

The Bill of Materials (BOM) module provides a combined stock assembly and process costing function. It is ideal for businesses involved in light assembly that don't require the full complexity of the Manufacturing module.

Sage 200 Bill of Materials is directly integrated with Sage 200 Stock Control and Nominal Ledger modules. It can also be used with the Sage 200 Manufacturing modules (Estimating, Planning and Works Orders).

Available with a choice of deployment (on premise or online) and a variety of payment options (upfront or monthly), giving you greater choice and flexibility.

The BOM module can help you

Improve Efficiency

Understand your Costs

Control your Stock

Improve quality

Improve Efficiency

BOM Workspaces: Bring together information in a single screen so your team have real time and relevant information at the click of a button. Web based access gives your team the critical information they need, wherever they are.

Trial kitting and maximum build function

Quickly identify whether you have sufficient stock to build the quantity of items that you need. See exactly what additional stock is needed and easily generate multiple purchase orders at the click of a button.

Operation templates and BOM copy function

Save time by copying BOMs from one stock item to another. Generate preset operation templates to streamline your BOM building process.

'Implosion' and 'Explosion' views

Quickly and easily understand what components are contained within a BOM and also roll up to see which BOM a component is contained within.

Print picking Lists

Quickly and easily print both picking/build lists so that your team know exactly how many of each component is required for the build quantity you need.

Understand your costs

Includes sub-contract and piece workoperations

Ensure you understand your costs fully by including subcontractor costs as part of your BOM and specifically operations.

Scrap allowances

Get accurate costings by incorporating an automatic scrap allowance for your entire BOM or at a component level.

Costing analysis

Calculate the cost of building items including stock, resources and subcontract operations. Costings are pulled from the stock module itself, removing any need to re-key data. When used in conjunction with batch and serial no. traceability you can pull actual costs simply and easily.

Cost history

Monitor estimated vs actual costs for each BOM. Track your costing history so that you can understand exactly when and why your costs have changed. This can be viewed visually over time for ease of interpretation and analysis.

Control your stock

Allocate stock

Reserve stock for particular builds to ensure it is not sold or allocated to other orders.

Reverse build

Easily reverse BOMs that you have built (within a limited time frame and as long as stock has not been recorded as allocated or issued) and put items back into stock without having to manually account for it, ensuring your stock is kept up to date and accurate.

Scrap allowances

Remove the potential for stock shortages by incorporating a scrap allowance into your BOM builds.

Improve Quality

BOM versioning

Ensure you consistently build your items correctly with version control. Set a status for each BOM you create which controls whether or not that BOM can be used so you never build from the wrong version.

Record attachments/drawings

Attach drawings and documents to a BOM to create a central store of your data, this gives you a single point of information for your team to prevent mistakes, lost information and reduce time spent looking for items.

Why itas?

Trusted by our clients since 1995, we deliver tailored software solutions and expert advice that gives your growing business the tools it needs to succeed.

Our team of experienced dedicated consultants will get to know you and understand your business so we can design and deliver the right solution for you.

With years of industry experience in CRM, process design, manufacturing and accounts, we have the knowledge you need to get the most out of your systems.

The itas support team are handpicked for their knowledge, great sense of humour and the fact that they get a buzz out of solving your problems. So no matter what your issue is, you know you have a friendly voice waiting to receive your call.

Even our training is designed to get you up to speed faster, with engaging trainers and a focus on practical activities, so you can hit the ground running.

With our expertise and passion for finding the right solution, our systems and our support gives you the freedom to focus on what you do best.

We look forward to working with you!
